How to Set Up a Router on the CSL Network

Concordia Seminary Technology Services realizes that wireless networking is becoming a very convenient way to share one access point with many devices.

If you have any issues or questions with internet access at Concordia Seminary, please call Technology Services at ext. 7231 or visit them in the basement of Sieck Hall.

Because of the variety and quality of routers in existence, you might feel more comfortable having Technology Services check your router.

If you wish to connect your router yourself, please follow these directions exactly. If you are not able to get yourself connected to the campus network, contact the Technology Services Help Desk IMMEDIATELY!

1. When installing a wireless router at Concordia Seminary, do NOT follow the instructions that were supplied with the router.
2. Before plugging an Ethernet cable into the wall, connect your computer to your router using one of the router’s LAN ports.
3. Log into your router. This is usually done by opening up a web browser and going to 192.168.1.1 or 192.168.1.254. If you haven’t changed the settings, the default credentials should be listed on a sticker on your router or in the router’s instruction packet.
4. Turn off the DHCP server on your router. This should be under the basic settings.
5. Remove the Ethernet cable from your computer.
6. Plug one end of your Ethernet cable in the wall jack and the other in the LAN port.

If you do not understand any part of these instructions, please bring your router down to the Technology Services Help Desk in the basement of Sieck Hall, and we will be happy to assist you.

By following these directions, you are letting Concordia Seminary act as your network.

If your router causes problems on the network, your room port will be disabled and you MUST bring your router down to the Technology Services Help Desk to correct the problem. Once the problem is corrected, your port will be re-enabled.
